

Concussion Policy

12/03/2014 Adopted

9/5/18 Revision to Reflect USA Hockey and the Pacific District Information

As per Jenna's Law (SB 721), an Oregon law enacted in 2014 that requires Oregon Non-School Sports and Officiating Organizations to implement concussion management guidelines for all teams that include children 17 years of age and younger.

(Max's Law, 2010, is a similar law that applies to Oregon School Districts)

- ❖ All Klamath Ice Sports Inc. (KIS) staff, youth hockey managers and volunteers, athletes and their parents/legal guardians if under the age of 18, will undergo *annual concussion training* to learn how to recognize the symptoms of a concussion and how to seek proper medical treatment for a person suspected of having a concussion.
- ❖ KIS staff and youth hockey manager and volunteer education and acknowledgment will be met by the following:
 - KIS will use the "HEADS UP! CONCUSSION IN YOUTH SPORTS" training video and exam module:
<https://www.cdc.gov/headsup/youthsports/training/index.html>
 - The training video and exam module must be completed and a copy of the certificate of completion turned into the KIS Assistant Arena Director prior to the first scheduled on ice hockey session.
- ❖ KIS adult (ages 18+) athlete education and acknowledgment will be met by the USA Hockey acknowledgment.
 - Adult athletes will be encouraged to review the "HEADS UP! CONCUSSION IN YOUTH SPORTS" training video and exam module as well:
<https://www.cdc.gov/headsup/youthsports/training/index.html>

- ❖ **KIS youth (ages 17 and younger) athlete education and acknowledgment** will be met by reviewing and signing the USA Hockey Pacific District Fact Sheet and Parent-Athlete Signature Sheet (two page sheet that includes concussion education information). [The completed signature portion of the Parent-Athlete Signature Sheet must be returned to the KIS Assistant Arena Director prior to the first scheduled on ice hockey session.](#)
- ❖ **KIS parent/legal guardian education and acknowledgment** will be met by the USA Hockey acknowledgment.
 - Parents will be encouraged to review the “HEADS UP! CONCUSSION IN YOUTH SPORTS” training video and exam module as well:
<https://www.cdc.gov/headsup/youthsports/training/index.html>
- ❖ **KIS coach education and acknowledgment** will be met by the Coaching Education Program in tandem with the USA Hockey acknowledgement.
- ❖ **KIS referee/official education and acknowledgment** will be met by the training given by the Oregon State Hockey Association (OSHA) Officials Organization in tandem with the USA Hockey acknowledgment.
- ❖ **All KIS athletes suspected of a concussion (signs, symptoms, behaviors with or without the actual diagnosis of a concussion) following a blow to the head or to the body must be immediately removed from the practice or the game and cannot return to play that calendar day.**
 - [KIS youth players must seek medical care and cannot return to play without a medical release.](#)
 - [KIS adult players should seek medical care and should not return to play without a medical release.](#)
- ❖ KIS will make available our concussion guidelines and other relevant educational materials to inform and educate people about the symptoms and warning signs of a concussion to the following people: youth under 18 years of age desiring to be an athlete in our program, their parents and legal guardians, and the KIS coaches, officials (referees), managers, and staff members.

A Fact Sheet for ATHLETES

HEADS UP CONCUSSION

WHAT IS A CONCUSSION?

A concussion is a brain injury that affects how your brain works. It can happen when your brain gets bounced around in your skull after a fall or hit to the head.

This sheet has information to help you protect yourself from concussion or other serious brain injury and know what to do if a concussion occurs.

WHAT SHOULD I DO IF I THINK I HAVE A CONCUSSION?

REPORT IT.

Tell your coach and parent if you think you or one of your teammates may have a concussion. You won't play your best if you are not feeling well, and playing with a concussion is dangerous. Encourage your teammates to also report their symptoms.

GET CHECKED OUT BY A DOCTOR.

If you think you have a concussion, do not return to play on the day of the injury. Only a doctor or other health care provider can tell if you have a concussion and when it's OK to return to school and play.

GIVE YOUR BRAIN TIME TO HEAL.

Most athletes with a concussion get better within a couple of weeks. For some, a concussion can make everyday activities, such as going to school, harder. You may need extra help getting back to your normal activities. Be sure to update your parents and doctor about how you are feeling.

Centers for Disease Control and Prevention
National Center for Injury Prevention and Control

GOOD TEAMMATES KNOW:

IT'S BETTER TO MISS ONE GAME THAN THE WHOLE SEASON.

HOW CAN I TELL IF I HAVE A CONCUSSION?

You may have a concussion if you have any of these symptoms after a bump, blow, or jolt to the head or body:

-  **Get a headache**
-  **Feel dizzy, sluggish or foggy**
-  **Be bothered by light or noise**
-  **Have double or blurry vision**
-  **Vomit or feel sick to your stomach**
-  **Have trouble focusing or problems remembering**
-  **Feel more emotional or "down"**
-  **Feel confused**
-  **Have problems with sleep**

A concussion feels different to each person, so it's important to tell your parents and doctor how you feel. You might notice concussion symptoms right away, but sometimes it takes hours or days until you notice that something isn't right.

The information provided in this document or through linkages to other sites is not a substitute for medical or professional care. Questions about diagnosis and treatment for concussion should be directed to a physician or other health care provider.

HOW CAN I HELP MY TEAM?

PROTECT YOUR BRAIN.

All your teammates should avoid hits to the head and follow the rules for safe play to lower chances of getting a concussion.

BE A TEAM PLAYER.

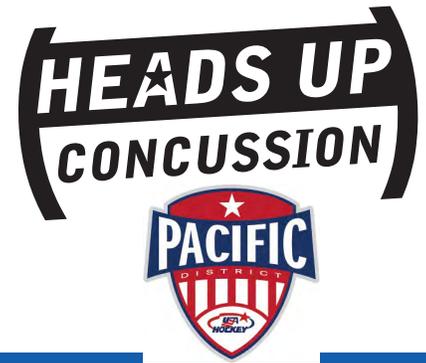

If one of your teammates has a concussion, tell them that they're an important part of the team, and they should take the time they need to get better.

CONCUSSION Information Sheet

This sheet has information to help protect your children or teens from concussion or other serious brain injury. Use this information at your children's or teens' games and practices to learn how to spot a concussion and what to do if a concussion occurs.

What Is a Concussion?

A concussion is a type of traumatic brain injury—or TBI—caused by a bump, blow, or jolt to the head or by a hit to the body that causes the head and brain to move quickly back and forth. This fast movement can cause the brain to bounce around or twist in the skull, creating chemical changes in the brain and sometimes stretching and damaging the brain cells.

How Can I Help Keep My Children or Teens Safe?

Sports are a great way for children and teens to stay healthy and can help them do well in school. To help lower your children's or teens' chances of getting a concussion or other serious brain injury, you should:

- Help create a culture of safety for the team.
 - › Work with their coach to teach ways to lower the chances of getting a concussion.
 - › Talk with your children or teens about concussion and ask if they have concerns about reporting a concussion. Talk with them about their concerns; emphasize the importance of reporting concussions and taking time to recover from one.
 - › Ensure that they follow their coach's rules for safety and the rules of the sport.
 - › Tell your children or teens that you expect them to practice good sportsmanship at all times.
- When appropriate for the sport or activity, teach your children or teens that they must wear a helmet to lower the chances of the most serious types of brain or head injury. However, there is no "concussion-proof" helmet. So, even with a helmet, it is important for children and teens to avoid hits to the head.

Plan ahead. What do you want your child or teen to know about concussion?

How Can I Spot a Possible Concussion?

Children and teens who show or report one or more of the signs and symptoms listed below—or simply say they just "don't feel right" after a bump, blow, or jolt to the head or body—may have a concussion or other serious brain injury.

Signs Observed by Parents or Coaches

- Appears dazed or stunned.
- Forgets an instruction, is confused about an assignment or position, or is unsure of the game, score, or opponent.
- Moves clumsily.
- Answers questions slowly.
- Loses consciousness (*even briefly*).
- Shows mood, behavior, or personality changes.
- Can't recall events *prior to* or *after* a hit or fall.

Symptoms Reported by Children and Teens

- Headache or "pressure" in head.
- Nausea or vomiting.
- Balance problems or dizziness, or double or blurry vision.
- Bothered by light or noise.
- Feeling sluggish, hazy, foggy, or groggy.
- Confusion, or concentration or memory problems.
- Just not "feeling right," or "feeling down."

Talk with your children and teens about concussion. Tell them to report their concussion symptoms to you and their coach right away. Some children and teens think concussions aren't serious or worry that if they report a concussion they will lose their position on the team or look weak. Be sure to remind them that *it's better to miss one game than the whole season.*

Centers for Disease Control and Prevention
National Center for Injury Prevention and Control

Concussions affect each child and teen differently. While most children and teens with a concussion feel better within a couple of weeks, some will have symptoms for months or longer. Talk with your children's or teens' health care provider if their concussion symptoms do not go away or if they get worse after they return to their regular activities.

What Are Some More Serious Danger Signs to Look Out For?

In rare cases, a dangerous collection of blood (hematoma) may form on the brain after a bump, blow, or jolt to the head or body and can squeeze the brain against the skull. Call 9-1-1 or take your child or teen to the emergency department right away if, after a bump, blow, or jolt to the head or body, he or she has one or more of these danger signs:

- One pupil larger than the other.
- Drowsiness or inability to wake up.
- A headache that gets worse and does not go away.
- Slurred speech, weakness, numbness, or decreased coordination.
- Repeated vomiting or nausea, convulsions or seizures (shaking or twitching).
- Unusual behavior, increased confusion, restlessness, or agitation.
- Loss of consciousness (passed out/knocked out). Even a brief loss of consciousness should be taken seriously.

Children and teens who continue to play while having concussion symptoms or who return to play too soon—while the brain is still healing—have a greater chance of getting another concussion. A repeat concussion that occurs while the brain is still healing from the first injury can be very serious and can affect a child or teen for a lifetime. It can even be fatal.

Revised 5/2015

What Should I Do If My Child or Teen Has a Possible Concussion?

As a parent, if you think your child or teen may have a concussion, you should:

1. Remove your child or teen from play.
2. Keep your child or teen out of play the day of the injury. Your child or teen should be seen by a health care provider and only return to play with permission from a health care provider who is experienced in evaluating for concussion.
3. Ask your child's or teen's health care provider for written instructions on helping your child or teen return to school. You can give the instructions to your child's or teen's school nurse and teacher(s) and return-to-play instructions to the coach and/or athletic trainer.

Do not try to judge the severity of the injury yourself. Only a health care provider should assess a child or teen for a possible concussion. Concussion signs and symptoms often show up soon after the injury. But you may not know how serious the concussion is at first, and some symptoms may not show up for hours or days.

The brain needs time to heal after a concussion. A child's or teen's return to school and sports should be a gradual process that is carefully managed and monitored by a health care provider.
